

Memory Geogger

Identify the biomes labelled A and B in the map below.

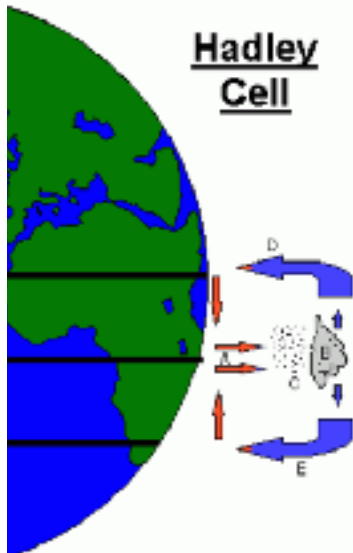

Outline 2 ways vegetation has adapted to the tropical rainforest environment.

Explain why trees in the rainforest have wide buttress roots.

Explain one sustainable method of managing the tropical rainforest.

Match the statements below to the letters on the diagram to explain why deserts have a hot, dry climate.

_____ Heavy equatorial rainfall occurs (like in the rainforest!)

_____ As you would expect, temperatures at the equator are highest. Warm air rises containing evaporated moisture.

_____ The cool, dry air then begins descending at the tropics. The air warms up. Any remaining moisture in the air is held as water vapour (invisible).

_____ The air cools, condenses and forms clouds.
